619. Biggest Single Number

Easy  379 161   Companies[SQL Schema](#) > [Pandas Schema](#) >

Table: MyNumbers

Column Name	Type
num	int

This table may contain duplicates (In other words, there is no primary key for this table in SQL).
Each row of this table contains an integer.

A **single number** is a number that appeared only once in the `MyNumbers` table.

Find the largest **single number**. If there is no **single number**, report `null`.

The result format is in the following example.

Example 1:

Input:

MyNumbers table:

num
8
8
3
3
1
4
5
6

Output:

num
6

Explanation: The single numbers are 1, 4, 5, and 6.
Since 6 is the largest single number, we return it.

Example 2:

Input:

MyNumbers table:

num
8
8
7
7
3
3
3

Output:

num
null

Explanation: There are no single numbers in the input table so we return null.
