1978. Employees Whose Manager Left the Company

Easy 198 18

Companies

SQL Schema >

Table: Employees

Column Name	Type
employee_id	int
name	varchar
manager_id	int
salary	int

In SQL, `employee_id` is the primary key for this table. This table contains information about the employees, their salary, and the ID of their manager. Some employees do not have a manager (`manager_id` is null).

Find the IDs of the employees whose salary is strictly less than `$30000` and whose manager left the company. When a manager leaves the company, their information is deleted from the `Employees` table, but the reports still have their `manager_id` set to the manager that left.

Return the result table ordered by `employee_id`.

The result format is in the following example.

Example 1:

Input:

Employees table:

employee_id	name	manager_id	salary
3	Mila	9	60301
12	Antonella	null	31000
13	Emery	null	67084
1	Kalel	11	21241
9	Mikaela	null	50937
11	Joziah	6	28485

Output:

employee_id
11

Explanation:

The employees with a salary less than `$30000` are 1 (Kalel) and 11 (Joziah). Kalel's manager is employee 11, who is still in the company (Joziah). Joziah's manager is employee 6, who left the company because there is no row for employee 6 as it was deleted.
