

577. Employee Bonus

Easy 529 149

Companies

SQL Schema

Table: Employee

Column Name	Type
empId	int
name	varchar
supervisor	int
salary	int

empId is the primary key column for this table.
Each row of this table indicates the name and the ID of an employee in addition to their salary and the id of their manager.

Table: Bonus

Column Name	Type
empId	int
bonus	int

empId is the primary key column for this table.
empId is a foreign key to empId from the Employee table.
Each row of this table contains the id of an employee and their respective bonus.

Write an SQL query to report the name and bonus amount of each employee with a bonus **less than** 1000.

Return the result table in **any order**.

The query result format is in the following example.

Example 1:

Input:

Employee table:

empId	name	supervisor	salary
3	Brad	null	4000
1	John	3	1000
2	Dan	3	2000
4	Thomas	3	4000

Bonus table:

empId	bonus
2	500
4	2000

Output:

name	bonus
Brad	null
John	null
Dan	500
