1729. Find Followers Count

Easy 416 24

Companies

SQL Schema >

Table: Followers

```
+-----+-----+
| Column Name | Type |
+-----+-----+
| user_id     | int  |
| follower_id | int  |
+-----+-----+
```

(user_id, follower_id) is the primary key (combination of columns with unique values) for this table.
This table contains the IDs of a user and a follower in a social media app where the follower follows the user.

Write a solution that will, for each user, return the number of followers.

Return the result table ordered by `user_id` in ascending order.

The result format is in the following example.

Example 1:

Input:

Followers table:

```
+-----+-----+
| user_id | follower_id |
+-----+-----+
| 0       | 1           |
| 1       | 0           |
| 2       | 0           |
| 2       | 1           |
+-----+-----+
```

Output:

```
+-----+-----+
| user_id | followers_count |
+-----+-----+
| 0       | 1               |
| 1       | 1               |
| 2       | 2               |
+-----+-----+
```

Explanation:

The followers of 0 are {1}

The followers of 1 are {0}

The followers of 2 are {0,1}
